CENTER LINE[®] Series RS Butterfly Valves
Metric/DIN

CRANE[®]

Energy Flow Solutions

www.craneenergy.com

Key Features

A resilient seated butterfly valve with superior design features and materials of construction to provide repeatable tight shutoff in severe abrasive and corrosive environments for a variety of applications.

Key Features

- 1 Replaceable cartridge seat design with solid backup ring
- 2 Only 2 wetted parts, disc and seat, with no exposed metal-to-metal contact points, for maximum corrosion resistance
- 3 Self-centering disc with smooth finish and spherical edge reduces wear and resists corrosion and abrasion

Overview & Applications

Overview

Size:	DN 40-1400
Class:	PN 10-16 ANSI 150
Temperature:	-10° to +150°C
Face to Face:	All short pattern
Body Types:	Wafer with Centering Lugs Wafer Lugged Flanged

Applications

Power – Flue Gas Desulfurization, water and chemical isolation
 Sugar – juice slurry, water, syrup, lime, melt water, and finish product isolations
 Vacuum Systems – vacuum isolations
 Chemical – water systems, reliability requirements
 Oven OEMs
 Cleaning machine OEMs – used by automobile manufacturers
 Steel – cooling water applications

Design Features

Design Features

Corrosion resistance

With Center Line[®] Series RS Butterfly Valves only two parts of the valve come in contact with the medium. This means that neither the body nor mechanical parts such as the shaft are exposed to the corrosive environment.

The only two parts in contact with the medium are the body lining and the disc. These are available in a selection of materials so that a suitable corrosion resistant combination can be chosen for most any application.

Bi-directional shutoff

Center Line[®] Butterfly Valves are liquid and gas-tight in both flow directions. The disc presses with uniform compression into the elastic cartridge seat over the entire circumference of the valve.

Replaceable cartridge seat

The replaceable seat consists of a reinforced back-up ring, on which the elastomer seat material is vulcanized. When mounting the valve between the pipe flanges this stable seat cannot be deformed or displaced. The cartridge design also prevents deformation when the valve is cycled, such as stretching and bulging of the elastomer in front of the moving disc.

The fixed connection between elastomer and back-up ring allows the use of the valve in full vacuum and high flow velocities. The slightly protruding sealing lip of the seat also serves as the flange seal.

Square disc/shaft connection

Eliminates the need for pins allowing axial movement and self-centering of the disc. This eliminates excess wear and stress of the elastomer seat.

- 1 Shaft
- 2 Bushing
- 3 Body
- 4 Stem Retainer
- 5 Round Wire Snap Ring
- 6 Cartridge Seat
- 7 Disc
- 8 Lower Stem Pin
- 9 Lower Stem

Design Features

Blow-out proof shaft

All Center Line[®] Series RS Butterfly Valves feature a lock at the valve neck to prevent shaft blow-out.

Actuator mounting

All Center Line[®] Series RS Butterfly Valves feature an ISO 5211 top flange for simple mounting of hand lever, gear, pneumatic or other actuators. A conversion – even during operation – from manual to automatic actuator and reverse is possible without any difficulties.

Actuator adaptation

Center Line[®] Series RS Butterfly Valves are available for 3 closing pressures – 3.5 bar, 10 bar and 16 bar. The actuator size can be selected individually against the pipeline pressure available, so smaller actuators can be utilized when torque requirements are low.

Maintenance-free operation

The shafts of the Center Line[®] Series RS Butterfly Valves are mounted in self-lubricating DU[®] bearings eliminating the need for maintenance even after a long operating period.

Models Available

Models Available

With the proven modular system, Center Line® Series RS Butterfly Valves can be directly equipped with a variety of actuators. Available ex stock, various manual or automatic actuators can be fitted and assembled quickly to meet your needs. A number of accessories are available.

Overview of Flue Gas Desulfurization

What is Flue Gas Desulfurization (FGD)?

Flue Gas Desulfurization is the removal of sulfur oxides, produced during the burning of fossil fuel, from atmospheric emissions.

One of these oxides is Sulfur dioxide (SO₂) which causes pollution and acid rain. Sulfur oxides also have detrimental effects on humans, soil, plants, and building materials.

What Type of Environment Must These Valves Withstand?

The clean installation of Center Line® RS valves.

- ❶ **Highly Corrosive**
 High chloride content (up to 70,000 ppm)
 Low pH: 2 – 6
 Fluorides present: 0 – 500ppm
 Elevated temperatures: 45 - 72°C
- ❷ **Highly Abrasive**
 High concentration of solid particles: up to 50%
 Calcium Hydroxide
 Elevated velocity: 2.3 – 3.5 m/s
 Elevated pressure: 2 – 8 bar
- ❸ **The most severe conditions in FGD service are too corrosive for high alloys like Hastalloy® and Super Duplex, but Center Line RS® offers a solution with Hostalen® GUR® coated discs**
 Temperatures up 80°C
 pH as low as 0
 Chloride up to 70,000 ppm
 Fluoride up to 500 ppm

Center Line RS valves in FGD Slurry Isolation Service:

- Corrosion Resistant
- Abrasion Resistant
- Provide reliable, tight shutoff

Benefits of Center Line® RS in Flue Gas Desulfurization

Center Line® RS Key Design Features and Materials for FGD

The design and material selection of the Center Line® RS valve ensures CRANE® can meet any wet FGD slurry isolation valve application. Material selection is the result of 30 years of research and experience, with installations in over 130 FGD systems globally!

Disadvantages of Knifegates Versus Butterfly Valves

- Unreliable shutoff
- Increased corrosion
- Slurry media can stick at the base of the valve body
- Need for splash containment to drain accumulated solids that may prevent full gate closure
- Much heavier than butterfly
- Handwheel operated valves require 80+ turns to stroke

The Benefits of Center Line[®] RS in Sugar Applications

The Benefits of Center Line[®] RS in Sugar Applications

- Suitable for full-vacuum conditions as required in the evaporator and the crystallization process
- Materials selection and design enables long-term, leak-tight shutoff in corrosive and abrasive services
- Long life time reduces plant services and cost for inspection and repair
- Field experience in more than 150 sugar plants globally
